

i-Tree Open Academy – Session 4 Q&A

Q: Can I use my own GIS data to draw boundaries?

A: The landscape interface cannot accept GIS data on the fly and only works with preprocessed boundaries. In the future we are exploring ways to allow custom boundaries.

Q: When will the 2020 Census data be available in Landscape?

A: There is no direct timeline on this yet – the Census bureau still has not released the necessary data at the block group level.

Q. How can I go about submitting new land cover data my city has just gathered?

A: Landscape can use hi-res canopy data provided by users, <https://landscape.itreetools.org/hires>. It takes a few months for us to integrate that type of data.
